Amendment to the Specification

Please replace the Abstract paragraph with the following paragraph:

The present invention provides a system and method for [providing remote device data synchronization] associating related information to personal information manager data. The present invention, delivers information to mobile users that is particularly relevant and personalized while mobile (such as, information associated with a particular time and/or place). In architecture, the system includes a [remote device with a device data, a server device containing an original data and a revision data of the original data, and a delta data that identifies only the changes between the original data and the revision data] a data acquisition module that acquires a data item in personal information manager data for related information to be acquired and a related information acquisition module that acquires the related information for the data item. An output module that provides the related information for the data item to the user. The present invention can also be viewed as a method for transmitting data that is modified on a server to a remote device. The method operates by [(1) providing an original data; (2) creating update data of the original data; and (3) generating a delta data that identifies only the changes between the original data and the updated data; and (4) transmitting the delta data to a remote device] selecting a data item in the personal information manager data for related information to be acquired and acquiring the related information for the data item. Once acquired, the related information for the data item is provided to the user.
